

CASE STUDY

PlanetJ and Operation Blessing Help Haiti

Operation Blessing is a non-profit organization that teams with volunteers to help victims of natural disasters performing various humanitarian tasks. Medical professionals from Mayo Clinic in Rochester, MN, (organized by Operation Blessing), has been providing life-saving medical care to countries that cannot afford to pay for such services. PlanetJ was consulted to provide a quick, inexpensive and intuitive web application to help in their mission; of providing Haitian hospitals the benefit of a web based medication supply and inventory application.

The Challenge

The earthquake in Haiti devastated many villages throughout the country. While many people died, there continues to be numerous impoverished sick children and adults seeking treatment, and supplies are quite limited. Volunteer pharmacists, nurses, and physicians have been donating time and medicine to help three hospitals in Haiti, but they lacked a simple way for them to request medications and manage existing inventory.

It was necessary to have the application easy to use and bilingual to serve the Haitian hospital staff as they currently do not use many computer technologies.

Company Profile

Name: Operation Blessing/Mayo Clinic

Industry: Health Care—NPO

Products:
WOW 6.5.5 Enterprise Edition
WOW Fusion Charts

The Solution

PlanetJ, using the WOW product, developed an online web application in about a week that allows administrators the ability to add, edit and delete inventory items; remove inventory quantities; view drug requests by hospital and/or status; provide ability for hospitals to view order request status administration to process drug requests from hospitals. All this needed to have secure access to both administration and hospital staff.

During training, the Haitians caught on very quickly largely due to the multi-language (English and Creole) support that WOW provided. They needed something very simple to train and use. WOW applications fit this bill perfectly.

“We really appreciate how quickly you put the program together and the fast responses to our questions to get this off the ground quickly. You definitely had a hand in making Haiti a better place to receive health-care!”

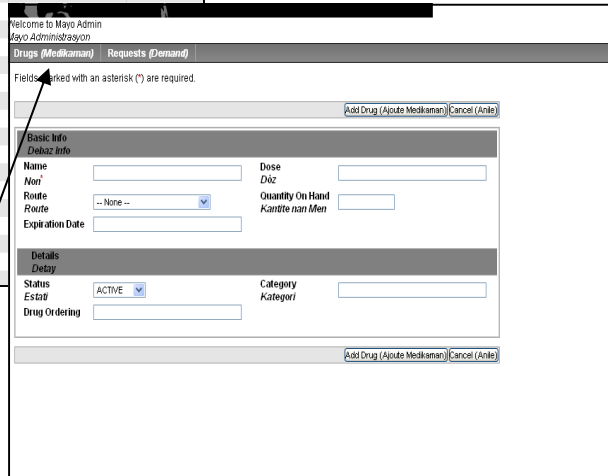

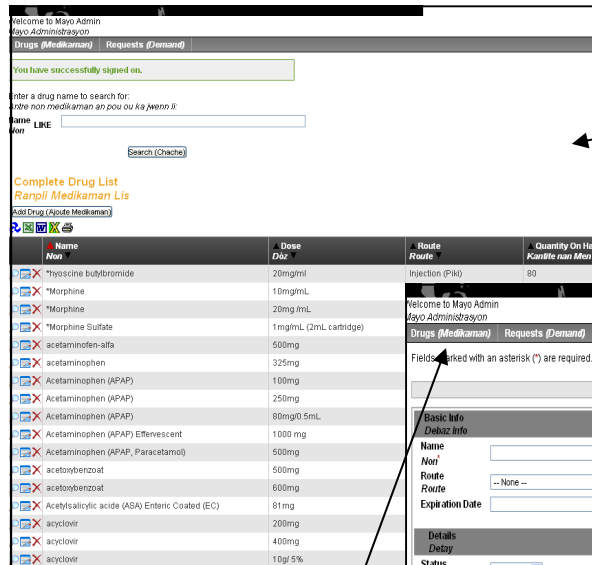

**~Michelle Holm
PharmD, RPh
Rochester, MN**

CASE STUDY

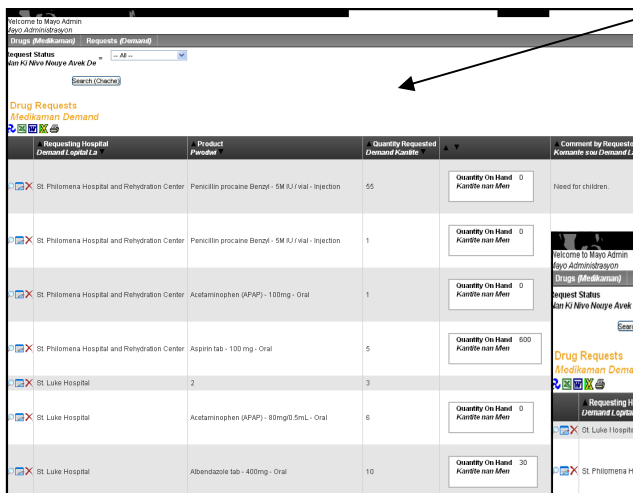

How It Works

There were a total of three applications built to solve their request; Admin, Central Pharmacy, and Hospital Request. Admin is discussed first below.

Once logged on to the system, a medication administrator can see all drugs listed, doses, route of delivery, status, category, expiration date and quantity available.

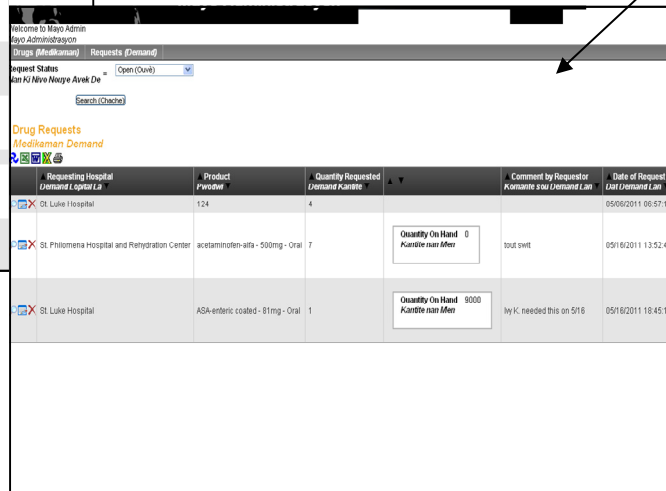

From a drop down list on the Admin home page, a user can easily enter in new medications. This application is displayed in English and Creole.

Administrators can see which hospital is requesting which products, how many, quantities on hand and other miscellaneous requests.

Further search can be done on status "open requests."

(continued)

“The Haitians LOVED the program and found it very easy to use. Within only 2 days of teaching the program we had 7 people trained and comfortable using the program and knowledgeable enough to teach it to others.”

~Michelle PharmD, RPh Rochester, MN

CASE STUDY

How It Works

Below is the second application; “Central Pharmacy.” These end users work on medication delivery to the three different Haitian hospitals. From the sign-in below, a user can manage medications by clicking on the edit icon on the left, apply changes in quantity, expiration date, dose and delivery method.

The screenshot shows the user sign-in interface with fields for User Id and Password, and a Sign In button. Below it is a 'Complete Drug List' table with columns for Name, Dose, Route, and Quantity On Hand.

Name	Dose	Route	Quantity On Hand	Expiration Date
acetaminofen-alfa	500mg	Oral (Medikaman nan Bouch)	0	10/11
acetaminophen	325mg	Oral (Medikaman nan Bouch)	0	6/11
acetaminophen (APAP)	100mg	Oral (Medikaman nan Bouch)	0	
Acetaminophen (APAP)	500mg	Oral (Medikaman nan Bouch)	1	07/2011
Acetaminophen (APAP)	250mg	Oral (Medikaman nan Bouch)	0	
Acetaminophen (APAP) Effervescent	1000 mg	Oral (Medikaman nan Bouch)	0	
Acetaminophen (APAP) infant gtt	80mg/0.5mL	Oral (Medikaman nan Bouch)	0	
acetyxybenzoat	powder 600mg	Oral (Medikaman nan Bouch)	80	7/2011
acetyxybenzoat	500mg	Oral (Medikaman nan Bouch)	280	07/2011
Acetylsalicylic acid (ASA) Enteric Coated (EC)	81mg	Oral (Medikaman nan Bouch)	0	
acid tranexamico	500mg	Injection (Pik)	24	9/14

The screenshot shows the 'Add Drug' form with fields for Name, Dose, Route, and Expiration Date. A note indicates that fields marked with an asterisk are required.

As with the Admin application, new medications can be entered as well.

Medication managers can monitor which hospitals have open requests, approve or disprove quantities within their requests, and change status to “open, approved, or denied”

Workers in the Central Pharmacy can also view open requests via text or chart.

The screenshot shows a table of open drug requests with columns for Requesting Hospital, Product, and Quantity Requested.

Requesting Hospital	Product	Quantity Requested
St. Philomena Hospital and Rehydration Center	acetaminofen-alfa - 500mg - Oral	7
St. Luke Hospital	ASA-enteric coated - 81mg - Oral	1

The screenshot shows a bar chart titled 'Open Requests by Drug' with three bars representing different drug types: ASA-enteric coated - 81mg - Oral, ASA, and acetaminofen-alfa - 500mg - Oral.

Drug	Open Requests
ASA-enteric coated - 81mg - Oral	1
ASA	4
acetaminofen-alfa - 500mg - Oral	7

Summary

Operation Blessing staff anticipated training issues. The people residing in Haiti have limited computer skills. A volunteer software engineer from Mayo Clinic, assisted the Haitian staff with training. He also provided management on-the-fly changes to the programs. He had this to say; ***“True story. For one user it took 15 minutes for her to learn to simply double click on a desktop shortcut that launched WOW. After she opened WOW we trained her on the application for maybe 15 minutes where after that time she was using WOW without guidance. Took her less time to learn WOW, then figuring out how to double click on a desktop shortcut.”***

The custom-ability of WOW really shinned through for the Haitian people and it also raised some brows in management. Making real-time changes to the application made two huge impressions. We were able to quickly tweak the application to make things simpler for the Haitian users. This was extremely useful because many of the users had little or no experience on a computer. Also, volunteers were super impressed with the ability of WOW to help take a Haitian dream and make it a reality in 3 weeks. Continued tweaks and customizations happening overnight instead of months have been verbally applauded on many occasions.”

WOW helped take a Haitian dream and make it a reality in 3 weeks!

~Tyler Holm
Software Engineer
Rochester, MN
